

Chinese Product Certification with the VDE – Competence from one source

The VDE Institute offers the handling of applications for Chinese approvals and would take care of all negotiations with Chinese Authorities.

CCC-Certification – Mandatory Scheme

For products listed in the „Catalogue of Products Subject to Compulsory Certification“ a CCC-Certificate has to be available when brought on the Chinese market. When importing such products to China, in addition the rules of the Chinese customs have to be observed which reflect on HS Code Numbers.

CQC-Certification – Voluntary Scheme

In addition to the mandatory CCC scheme, for products which are not listed in the „Catalogue of Products Subject to Compulsory Certification“ and for which a GB standard with corresponding IEC standard is available, the voluntary certification with the CQC Mark may be obtained. For manufacturers of components, the voluntary CQC Certification may describe an advantage on the market as during the verification of equipment such components would not require any further checking.

CCB route preferred for CCC

For most of the electrotechnical products the CCC Certification may be obtained via CB route. As to the experience so far gathered, this is the fastest way to reach CCC Certification. For many appliances, compliance with EMC standards is also part of CCC requirements.
